Title (not exceeding 30 words) Live- Removal of intravitreal and Sub-retinal Parasites by MIVS

Abstract (not exceeding 100 words)

Accidental travelers into the vitreous and the retina of the parasites is seen rarely. With the advent of MIVS (microincision vitrectomy system), they can be removed for salvaging the eye along with vision restoration without giving large incisions. This video shows two techniques of removal of intravitreal filarial worm and another sub retinal cysticercosis live and restoration of full sight post-operatively.
